OPERATOR EVALUATIONS

Evaluation of equipment/vehicle operators is a vital tool in the Due Diligence process. Ground Force Training Inc. certified trainers document the demonstrated ability in specific categories, skills and sub-skills. Equipment operator evaluations are task, equipment and location specific to ensure a comprehensive evaluation. This service ensures your training program is focused, maximizes your return on investment, and gives you the reliable information you need. Assessments are recommended for many reasons, including:

- To determine operator ability prior to training or promotion
- To establish a benchmark or starting point after a training program
- To determine the need for remedial training after an incident
- To determine an operator's overall skill level

Operator Evaluations

Operator Evaluations verify the risk status of operators. Using a combination of pre-operation checks and operational tasks (including on-the-road driving for vehicles), Ground Force Training Inc. instructors accurately evaluate operator skills. This culminates in a detailed report incorporating recommendations for corrective action where necessary.

- Target 'at risk' operators for training opportunities to remedy faulty habits
- Reduce incident/accident rate & equipment abuse due to faulty operations
- Reduce fleet operating costs through improved maintenance and increased efficiency
- Assist in an employee's progression plan to address shortfalls due to turnover and promotion
- Meet your 'duty of care' obligations under *Occupational Health and Safety Act* legislation
